

Polishing the “speech necklace”

Polish the “speech necklace” → **homophone verses**

---

Rehabilitation task : very fine vocalization of sounds.

Effect on *my* rehabilitation case : “regular” speech.

---

### Practice details

Practice time period : 7 weeks

Daily practice : 2h

### Personal rehabilitation use

*The task enabled by homophone verses, “very fine vocalization of sounds” may make them appear a little superfluous.*

*It is not the case AT ALL, because the pitch contours and the modulations of regular speech are very fine. A child needs **years** to learn to speak.*

*Although someone who does not have to rehabilitate her speech does not perceive this, “REGULAR” SPEECH IS VERY SUBTLE.*

**Early rehabilitatory use of homophone verses on my part would have been premature.**  
I used them only after I had re-learned all speech sounds and articulations.
