

Fine vocalizing of speech sounds and articulations, mastering spaces between words

Vocalize most fine speech sounds and articulations, and master spaces between words → Sentences difficult to understand which must be comprehended phonetically by a third party

Rehabilitation task : very significant rehabilitation work on speech sounds, articulations and the spaces between words.

Effect on my rehabilitation case : regaining a mastery of almost all speech sounds and articulations, and of the spaces between words.

Practice details

Practice time period : 7 weeks

Daily practice : 3h

Personal rehabilitation use

During the last 2 months of my speech rehabilitation, I used sentences difficult to comprehend because they are made of rare words. A third party listener who did not have them written could therefore often have only a phonetic comprehension of them.

The sentences I used are the “difficult sentences” of a Belgian spelling club.
